

Debugging

Understanding Angular Error Messages

- It's a good idea to use the browser console to diagnose errors (**duh**)
- We can trace errors in the console

Debugging Code in the Browser Using Sourcemaps

- Useful for when error messages are useless or unavailable
- In **Chrome**, we can inspect the **Sources** tab to view our script bundles
 - From here, we can place breakpoints to identify exactly where our code breaks
- We can also download the **Angular DevTools** extension for further debugging
